

C5-Branched dibasic acid metabolism

Oxidative phosphorylation

Energy metabolism

Secondary bile acid biosynthesis

Valine, leucine and isoleucine biosynthesis

Arginine and proline metabolism

Pantothenate and CoA biosynthesis

Porphyryn and chlorophyll metabolism

Glycine, serine and threonine metabolism

Lysine biosynthesis

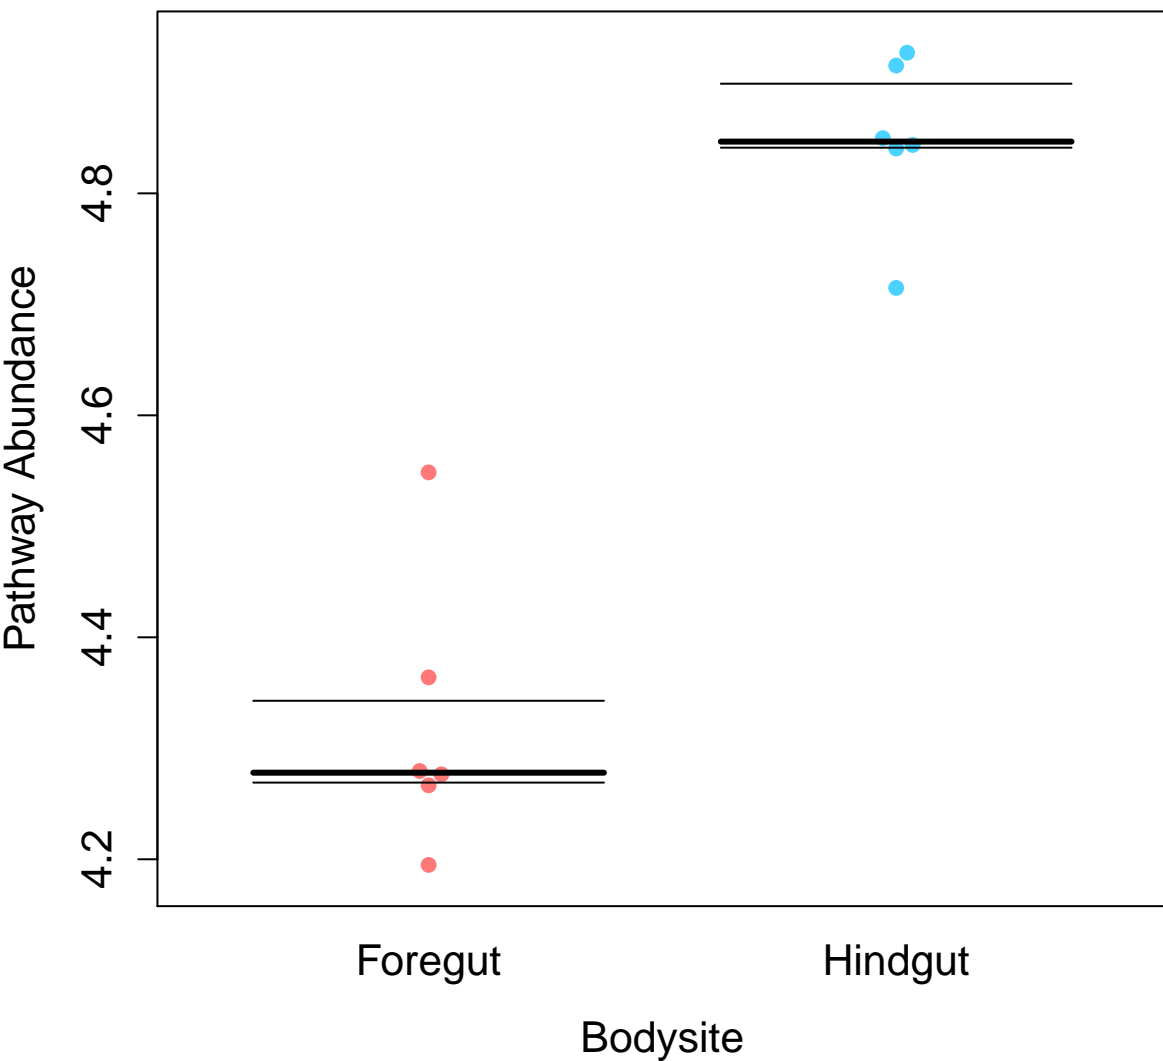

Carbon fixation pathways in prokaryotes

Cellular antigens

Glycerophospholipid metabolism

Phenylalanine, tyrosine and tryptophan biosynthesis

Tetracycline biosynthesis

Transcription factors

RNA transport

Signal transduction mechanisms

ABC transporters

Apoptosis

Biosynthesis of siderophore group nonribosomal peptide

Cysteine and methionine metabolism

Fatty acid biosynthesis

Histidine metabolism

MAPK signaling pathway – yeast

Methane metabolism

Other transporters

Others

Pyruvate metabolism

Replication, recombination and repair proteins

Ribosome Biogenesis

Thiamine metabolism

Transcription machinery

Tropane, piperidine and pyridine alkaloid biosynthesis

Ubiquinone and other terpenoid–quinone biosynthesis

Ubiquitin system

alpha-Linolenic acid metabolism

Bacterial invasion of epithelial cells

Amino acid metabolism

Translation proteins

Fatty acid elongation in mitochondria

Fluorobenzoate degradation

Nitrotoluene degradation

Chromosome

Epithelial cell signaling in *Helicobacter pylori* infection

General function prediction only

Lipid biosynthesis proteins

Transporters

Base excision repair

Arachidonic acid metabolism

Taurine and hypotaurine metabolism

Biotin metabolism

Nitrogen metabolism

Novobiocin biosynthesis

Toluene degradation

Cytoskeleton proteins

Glycerolipid metabolism

RNA degradation

Antigen processing and presentation

Glycolysis / Gluconeogenesis

Progesterone-mediated oocyte maturation

Prostate cancer

Alanine, aspartate and glutamate metabolism

Amino acid related enzymes

Amoebiasis

Caprolactam degradation

Cell cycle – Caulobacter

Chaperones and folding catalysts

DNA repair and recombination proteins

Ion channels

NOD-like receptor signaling pathway

Proteasome

DNA replication proteins

Pentose and glucuronate interconversions

Tuberculosis

Pentose phosphate pathway

Steroid biosynthesis

D-Glutamine and D-glutamate metabolism

Fructose and mannose metabolism

Glutamatergic synapse

Mismatch repair

Peptidases

Peptidoglycan biosynthesis

Carbohydrate metabolism

Germination

Vitamin B6 metabolism

Aminoacyl-tRNA biosynthesis

Protein export

Folate biosynthesis

Cyanoamino acid metabolism

One carbon pool by folate

Type I diabetes mellitus

Phenylpropanoid biosynthesis

Homologous recombination

Biosynthesis of ansamycins

Nicotinate and nicotinamide metabolism

Citrate cycle (TCA cycle)

DNA replication

Galactose metabolism

Pyrimidine metabolism

Cardiac muscle contraction

Ribosome biogenesis in eukaryotes

Sporulation

Translation factors

Carbon fixation in photosynthetic organisms

Purine metabolism

Starch and sucrose metabolism

Parkinson's disease

Ribosome

Shigellosis

Foregut

Hindgut

BodySite

Bladder cancer

Geraniol degradation

Terpenoid backbone biosynthesis

Type II diabetes mellitus

Selenocompound metabolism

Bacterial toxins

Glycosaminoglycan biosynthesis – chondroitin sulfate

Insulin signaling pathway

Lipid metabolism

Plant-pathogen interaction

Transcription related proteins

RNA polymerase

Sphingolipid metabolism

Nucleotide excision repair

Drug metabolism – other enzymes

Bacterial chemotaxis

Glyoxylate and dicarboxylate metabolism

Riboflavin metabolism

Restriction enzyme

Xylene degradation

Primary bile acid biosynthesis

Protein processing in endoplasmic reticulum

Two-component system

Endocytosis

Fc gamma R-mediated phagocytosis

GnRH signaling pathway

Streptomycin biosynthesis

Dioxin degradation

Phosphatidylinositol signaling system

Amino sugar and nucleotide sugar metabolism

Prenyltransferases

Staphylococcus aureus infection

Other glycan degradation

Glutathione metabolism

Lipopolysaccharide biosynthesis proteins

Lysosome

Synthesis and degradation of ketone bodies

Chloroalkane and chloroalkene degradation

Sulfur metabolism

Inositol phosphate metabolism

Phosphonate and phosphinate metabolism

Lipopolysaccharide biosynthesis

Glycosaminoglycan degradation

Cell division

Polyketide sugar unit biosynthesis

Tryptophan metabolism

Glycosphingolipid biosynthesis – globo series

Protein kinases

Steroid hormone biosynthesis

Valine, leucine and isoleucine degradation

African trypanosomiasis

Nucleotide metabolism

Butirosin and neomycin biosynthesis

Zeatin biosynthesis

Limonene and pinene degradation

Other ion-coupled transporters

Adipocytokine signaling pathway

Aminobenzoate degradation

Chlorocyclohexane and chlorobenzene degradation

Pertussis

Renal cell carcinoma

Chagas disease (American trypanosomiasis)

Isoflavonoid biosynthesis

Biosynthesis of vancomycin group antibiotics

Glycosyltransferases

Huntington's disease
